ENTITIES INPUT / GAIN

The Future Classroom concept needs a holistic approach to transform all schools to become equipped, guided and supported to establish their own Future Classroom. To reach this goal we are introducing BITS online platform. BITS combines all entities needed to achieve Future Classroom. These entities are: Schools, Funders (Parents & Communities), Teachers and Freelancers. BITS platform will govern all these entities and support the future development with a systematic approach. Schools are expected to register to BITS platform and give their input on their current level of teaching and learning with technology integration. Inputs can be in a form of service request by the school and teachers for them to achieve the desired pedagogies. Service requests such as projector which is not in working condition to be repaired, additional tablets for the class usage or even the appropriate Instructional Design to be built by the an expert. All these service requests will made visible to the public. Funders, the public, freelancers, instructional design (ID) experts and technology providers (BITSER) can search any school they're interested in to play their part. BITSER can register on BITS platform, send fund and contribute to Future Classroom development. All entities on the platform will have a role to play and benefit from BITS.

CURRENT STATUS
- Completing Market Validation (Problem Interview) the third LMC Poster for Public Institutions
- Pivoting on 29 April 2016 to platform by adding Parents & Communities for problem interview
- Completing Market Validation (Problem Interview) the third LMC Poster for Public Institutions after pivoting on 22 Nov 2016
- Process for submitting final Market Validation results
- Developing a platform for Bantuan IT Sekolah (BITS)
