

Transformer or insulating oil insulates and cools transformers. RysOil green transformer oil is a synthetic ester derived from renewable vegetable oils and has been specially developed for use in oil-filled transformers. RysOil offer a unique combination of high performance features, including low volatility, high viscosity indices, low pour points, excellent thermo-oxidative stability and excellent lubricity. RysOil also features renewable and biodegradable characteristics, and very low carbon footprint compared to conventional mineral-based oil.

### CURRENT STATUS

- Market validation phase (problem interviews)
- Grant application
- Prototype development (validating and improvising current prototype)
