

Self Retaining Anal Speculum (Proctoscope)

SRAS is an anoscope designed as a tool providing an opening to the particular human cavity for the purpose of anorectal surgery. The novel features of SRAS are the retractable silicon collar which retain the product in the position without using the hands of operators. The clips on the ends of the wings are the locking system for the silicon collar. This hands free feature give the surgeons both hands to do the respective operations.

ACHIEVEMENT

Total fund secured RM500k

- SUPERB Teraju
- Met 12 surgeons where all of them gives positive feedback of the idea of the product.
- Specialists from two highly reputable private hospitals owned by the largest healthcare group in Malaysia have offer themselves to try & test the product once it is completed.

CURRENT STATUS

- Redesign the Product & Collaborate with MIMOS for producing the prototype.
- Finding fund for immediate mass production once the prototype has been approved by the Medical Device Authority.
- Conducted series of pitching sessions to funders including Cradle & MTDC.
